

Fire Performance You Can Trust!

Intex is back in the lab, continuing our commitment to delivering independently tested building solutions. Our latest Fire Assessment Report, completed by Jensen Hughes, confirms that Intex steel framed wall systems have been independently assessed in accordance with **AS 1530.4:2014**, demonstrating their ability to achieve specified Fire Resistance Levels (FRLs) and providing evidence of suitability for use under the **National Construction Code (NCC)**.

[Fire Report](#)

The assessment demonstrated that Intex wall systems are capable of achieving Fire Resistance Levels (FRLs) minimum of:

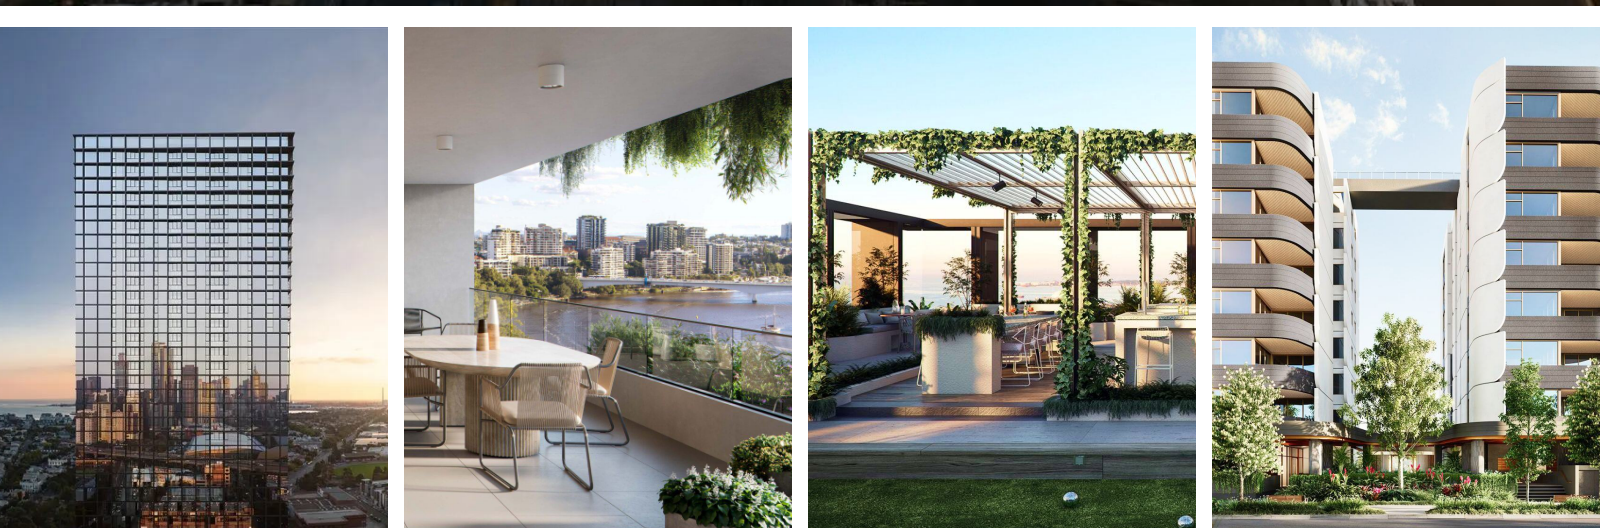

- /60/60 for single-layer wall systems using 16 mm fire-rated plasterboard.
- /120/120 for double-layer wall systems using 16 mm fire-rated plasterboard.
